

Aluminium cut to size sheets

INTRODUCTION:

Aluminium Sheet is the most widely used form of Aluminium. This material is ideal for many simple fabrications and is relatively easy to work with. Choose our cut-to-size service to readily meet your bespoke requirements.

Cut to length is an expression applied to the cutting of sheets in fixed lengths or according to customer requests. We perform this task at its own Coil Centre. Here, we have two cut to length production lines, we are able to perform accurate cuts and deliver sheets in the exact dimensions that you want. You will thus receive sheets that are ready for use.

SPECIFICATION:

Material: AA1100/1050/1060/1070/8011/3003/3102/3004/3005/3105/3104/5052/5754/5083

Cutting thickness: 0.10mm-5.5mm

Width: 10mm - 1600mm

Length: 10mm-3600mm

cutting tolerances

We can cut all aluminium materials at +/- 0.2 mm tolerance at a full diagonal/square

Application of Aluminium Sheet for Various Kinds of Applications

Mainly used insigns, billboards, building exterior decoration, bus body, high-rise buildings and factories wall decoration, kitchen sink, lamp, fan leaves, with pieces of electronic, chemical equipment, sheet metal processing parts, deep drawing or spinning hollowware, welding parts, heat exchangers, bell surface and disk, plate, kitchenware, decorations, reflective devices, ect

packaging:

No matter domestic short distance or export long distance transportation, proper packing of sheets can ensure safety transportation and avoid damaging sheets during transport, loading and unlaoding.

Our packing way is experenced during all these years:

First of all, a dense waterproof film is used to wrap the aluminum sheet tightly and carefully sealed with adhesive tape to ensure that no part of the aluminum sheet is exposed to the possible damp air

Outside the kraft paper, the whole layer of corrugated paper will be covered to protect the edges and corners of the aluminum plate with special corrugated protection, and finally with metal wrapping belt will be aluminum plate and wooden saucer packed together. Strengthen several tons of aluminium sheet to prevent the aluminium sheet from falling and sliding during transportation, and avoid friction between aluminium sheet and aluminium sheet after fixing.

Cut to size aluminium sheets is usually packed with wooden box or as per client's detail requirements
